≡ README.md   ✎

`License GPLv3`

Description

- This project was made using Javascript and Node.js. I was motivated to build this project because I wanted to practice with node.js and its ability to utilize the file system on my computer. It was built because I wanted to speed up the process of creating a README file for projects I have worked on. It is intended to solve the problem of the extended amount of time it takes to create a README. In making said project, I learned a basic understanding of markdown, template literals, npms, inquirer, and async functions.

Table of Contents

- Installation
- Usage
- Credits
- License

Installation

- This project can be installed by visiting its GitHub repository at Repository link and making a clone or fork of the repository.

Usage

-This project was intended to be used to create simple README's quickly so that the process of starting a README is sped up.

- Here is an example of the completed README: The README complete with formatting, etc.:

Credits

-This website was coded by Dylan Storm Johnson.

License

-This project is listed under the GNU General Public License v3.0. Under this license, complete source code of licensed work and modifications must be made available under the same license. Use must also preserve copyright and license notices. An express grant of patent rights is provided by contributors.

Badges

`JavaScript` `Node.js`

Features

-Upon opening, the user is presented with a series of questions about the project the README is being made for.

-The questions are topical, involving the making, languages, usage, features, credits, and more of the project at hand.

-The questions are worded simply and invite short, quick answers which can be fleshed out later within the README that is made.

-An image name and file type as well as a GitHub Repository URL are prompted to further provide context within the README.

-The final product is a well put together README.md file capable of fulfilling the role of the project's README with minor editing.

How to Contribute

-By downloading a fork of my repository on GitHub.

-Aside from the aforementioned ways you can contribute, the Contributor Covenant is an industry standard for contribution policy. (Please use the above guidelines for contribution and consult the Contributor Covenant on things not specified.)

Tests

-This project has no tests available.

Questions

-If you have any questions regarding this or my other projects, my GitHub account is [Dylan's GitHub account] (https://github.com/dylanstormjohnson).
